DIGITAL LITERACY PROJECT REPORT

Name: AYUSH CHANDRA DEWAN
Registration Number: 25BET10020
Branch: B.Tech CSE EDUCATION TECHNOLOGY
Year: First Year
Course Code: CSE0001 – Digital Literacy
University: VIT Bhopal University
Date: 31-03-2026

Introduction

Digital literacy means knowing how to use technology and the internet in a smart and safe way. Today, students use digital tools for studying, communication, and completing assignments. So it is very important to understand how to use these tools properly and responsibly. This project helped me learn basic digital skills that will be useful during my college life and future career.

In this project, I completed five different tasks related to digital literacy. These tasks included making an infographic, creating online profiles, practicing coding, writing professional emails, and learning about cybercrime safety. Each task helped me gain practical knowledge and improve my confidence in using digital platforms.

Task 1 – Digital Literacy Awareness Infographic

For Task 1, I created a digital literacy awareness infographic using Canva. Canva is a simple online tool that helps in designing posters and presentations. The main aim of the infographic was to explain what digital literacy is and why it is important for students.

In my infographic, I included information about safe internet practices, useful digital tools for students, and the importance of protecting personal information. I used simple words, icons, and colors so that the information is easy to understand. I also mentioned tools like Google Docs, Zoom, and online learning platforms that students use in their daily studies.

At first, it was a little difficult to choose the correct design and colors. But after trying different templates, I was able to create a clear and neat infographic. This task helped me improve my creativity and taught me how to present information in a visual way.

Task 2 – Building My Student Digital Portfolio

In Task 2, I created my digital portfolio by making accounts on three platforms: GitHub, LinkedIn, and HackerRank. These platforms are useful for students to show their skills and connect with professionals.

On GitHub, I created a profile and added my basic details like name, branch, and year. GitHub is mainly used to store and share coding projects. On LinkedIn, I filled in my education details such as my university name and degree. LinkedIn helps students build professional connections and learn about job opportunities. On HackerRank, I created an account to practice coding problems and improve my programming skills.

In the coming years, I plan to use these platforms regularly to upload my projects, learn new skills, and prepare for internships and jobs. This task helped me understand the importance of having a professional online presence.

Task 3 – Exploring Coding and Collaboration Platforms

For Task 3, I explored coding and collaboration platforms. In Part A, I created an account on HackerRank and solved a beginner-level coding problem. The problem helped me understand basic programming logic and how to think step by step while solving questions.

Practicing coding on platforms like HackerRank is useful because it improves problem-solving skills and prepares students for technical interviews. It also builds confidence in programming.

In Part B, I created a Google Form called "Digital Literacy Awareness Quiz" with five questions about digital literacy and online safety. The form included multiple-choice and short-answer questions. I also viewed the responses in a Google Sheet. This activity helped me learn how to collect information and conduct surveys using online tools.

This task showed me how digital platforms can help students work together, share information, and complete assignments more efficiently.

Task 4 – Professional Email and Social Media Etiquette

In Task 4, I learned how to write professional emails and follow proper communication rules. Writing emails in a polite and clear way is very important when communicating with teachers or companies.

The first email I wrote was to a professor requesting an extension for an assignment submission. In the email, I used a proper subject line, polite greeting, and respectful language to explain my reason. I also thanked the professor at the end of the email.

The second email was written to an internship coordinator to express my interest in a summer internship. In this email, I introduced myself, mentioned my course, and showed my interest in gaining practical experience. I ended the email with a professional closing.

I also created a social media Do's and Don'ts checklist to guide students on responsible online behavior. The checklist included points like sharing respectful content, protecting personal information, and avoiding fake news.

One example of poor digital communication is sending an email without a subject line or using informal language with a teacher. This can look unprofessional and cause confusion. Using proper email format and polite language can prevent such problems.

Task 5 – Cybercrime Awareness Case Study and Prevention Guide

For Task 5, I studied a common cybercrime called phishing. Phishing is when criminals send fake messages or emails to trick people into sharing personal information like passwords or bank details.

In a phishing attack, the attacker sends a message that looks like it is from a trusted source, such as a bank or website. The message usually contains a link to a fake website. When a person enters their details on that website, the attacker steals the information and may use it for fraud.

Students and online users are often targeted because they use the internet regularly. The results of phishing can include loss of money, stolen accounts, and stress for the victim.

While learning about this topic, I was surprised to see how realistic fake websites can look. Because of this, one habit I will change is checking links carefully before clicking on them. This task helped me understand the importance of staying alert while using the internet.

Conclusion

This Digital Literacy project helped me learn many useful skills related to technology and online safety. I learned how to create digital content, build professional profiles, practice coding, write proper emails, and understand cybercrime risks. These skills will help me in my studies and future career.

Overall, this project increased my confidence in using digital tools and taught me how to behave responsibly online.
